Construction Assumptions

CalEEMod Inputs that are not modeling defaults:

Project Location:	County Los Angeles
Climate Zone:	9
Operational Year:	2020 (construction to occur in 2019 with operation beginning in 2020)
Utility Company:	SCE

Land Use Type:

Commercial - Gen Office	400 sq ft 0.4 KSF	9.25 acres 1.19 acres 0.02 acres 11 acres	spreading basin access roads Building area Total Area graded
Parking lot	5 acre	5 acres	

Note: General Office and parking lot are used so that energy from the type of use (the 400 sqft scale/office building) and lights for the night activities are included. Specific construction and operational activities are modeled to address project specific activities. Note: Parking lot used in operations only for electrical usage of lighting for lights applied to the permanent access roads.

CONSTRUCTION INFORMATION

Construction Schedule:

Phase	Start Date	End Date	Days/Week	# days
Grading	1/1/2019	6/17/2019	5	120
Soil Import	1/1/2019	4/8/2019	5	70
Building	6/18/2019	7/29/2019	5	30
Arch Coating	7/18/2019	7/31/2019	5	10

Construction activities include grading and creating a new paved access road across the Buena Vista spreading basin, drainage improvement, construction of lighting in and around the quarry, new entrance gate, and a 20 ft x 20 ft operation buliding for office and truck scales. Construction is anticipated to occur over 8 months in 2019. Modeling Start and End dates represent conservative modeling assumptions only and do not represent the actual start/end dates as phases may actually begin/end at different times. The number of days per phase is the more accurate determination of phase length.

United Rock Quarry

Construction Assumptions

Grading to create a new access road across the Buena Vista Spreading Basin and to improve site drainage would involve approximately 400 truck trips per day for 14 weeks, approximately 27,500 truck trips assuming using 10 CY trucks.

400
70
27,500 truck trips
275,000 cubic yards assuming 10 cubic yards per truck

Notes:

1. Due to the way CalEEMod calculates daily and annual emissions, and the fact that in order to accurately model 400 trucks for a max day, that would equal 28,000 trucks. This would accurately calculate daily emissions but overestimate GHG emissions. In order to accurately calculate both max daily emissions and annual emissions, the hauling was split into two phases. One that models the emissions for GHGs using 27,500 trips over the 14 week (70 day) period; and one that models 400 trips in a single day. The default CalEEMod hauling distances were used for fill for the Buena Vista Spreading Basin .

LST area determination:

Based on the *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds* (available: [http://www.aqmd.gov/search?q=CalEEMod fact sheet](http://www.aqmd.gov/search?q=CalEEMod%20fact%20sheet)). The acreage of disturbance is determined by the equipment used and the daily acres disturbed per day for that equipment. The following table determines the acreage for the proposed project's LST analysis for construction and operational activities.

Equipment	Acres/day	Construction		Operation	
		#	Acres	#	Acres
crawler Tractor	0.5	0	0	0	0
Graders	0.5	2	1	1	0.5
Dozers	0.5	2	1	2	1
Scrapers	1	0	0	0	0
Total Acres:			2		1.5

United Rock Quarry

Operational Assumptions

The depositing of debris into the quarry is modeled as operational activities because it will last for the duration of the project and therefore is the main operation/activity associated with the project. Quarry activities include a maximum of 5 employees to manage the unloading of materials with up to 400 truck loads per day (with a maximum of 7,200 cubic yards) over an 8 hour period.

Operational Mobile Sources

	Trips*/day	Trips/year	Miles	comments
<i>Typical Operation</i>				
Haul Trucks	800.0	200,000	3	From the site to the 210/605 Interchange
Employees	12.5	N/A	default	
<i>Emergency Operation</i>				
Haul Trucks	1250.0	25,000	3	From the site to the 210/605 Interchange (Additional daily trucks to reach 1,250 trucks per day)

* Trips = one way trips. Miles from project description for trucks. Employee daily trips are 2.5 times the number of employees (assumes some offsite travel for lunch)

* Employee trips modeled are greater than what is projected in the project specific traffic study because the traffic study was not available at the time the modeling was conducted. As the modeled employee trips are greater than those estimated in the traffic study this represents a conservative analysis.

*assumes use of 2 full 4,000 gallon trucks per day for watering and no landscaping needs.

Assumed connection to sewer

Solid Waste Generation: Default

Operational Offroad equipment:

Equipment type	Phase	Type/Model	HP	#	Average Daily	Emergency Daily Usage
Excavator	Grading	Cat 330	247	1	8 hrs	24 hrs
Grader	Grading	default	default (174)	1	4 hrs	12 hrs
Water truck	Grading	default	default (400)	1	8 hrs	24 hrs
Dozers	Grading	Swamp Cats D10	default (255)	2	8 hrs	24 hrs
scrubber/sweeper	Grading	default	default (64)	1	4 hr	12 hrs
Portable lighting	Grading	default	default (64)	1	0 hr	12 hrs

* With only 5 employees onsite, equipment cannot be operated the full 8 hours a day of operation. Therefore, as a conservative estimate the equipment hours of operation total 40 for the day (8 hr * 5 workers) and are allocated starting with the highest hp. The Water truck is assumed to operate for 4 hours per day (assuming 1 hour per watering episode).

Soil Import: 7,200 cubic yard/day 1,872,000 cubic yards/year

Rule 403: For onsite equipment it was set to 3 waterings per day or 61% reduction
For grading associated with sediment material it was set to 85% to account for saturated nature of the materials being graded.

Energy Adjustments

Adjustment to CO2 intensity based on Renewable resources.

	Base	2020 ^{1,2}
CO intensity	702.43634	443.23733
% renewable	0%	36.90%

¹ <http://www.cpuc.ca.gov/renewables/>

² Note: The CPUC updated SCE's estimated renewables percentage anticipated by 2020 to 41.4 percent subsequent to the analysis being completed. Because the 36.9 percent represents a conservative value, the analysis was not updated.

NOx: The screening criteria for NOx were developed based on the 1-hour NO2 CAAQS of 0.18 ppm. However, since the publication of the SCAQMD's guidance, the USEPA has promulgated a 1-hour NO2 NAAQS of 0.100 ppm based on a 98th percentile value, which is more stringent than the CAAQS. In order to determine if project emissions would result in an exceedance of the 1 hour NO2 NAAQS, an approximated LST was estimated to evaluate the federal 1-hour NO2 standard, as the SCAQMD significance threshold has not been updated to reflect this standard. This was calculated by scaling the NO2 LST using the ratio of 1-hour NO2 standards (federal/state)(i.e., 128 lb/day * (0.10/0.18) = 71 lb/day)

AERSCREEN Input

Source Type: Area

Release Height: 3.66 meters

Release height is the anticipated plume height times 0.5

Plume height is Vehicle height times 2

This assumes an average vehicle height at 12.6 feet.

Maximum horizontal dimension:

Length of the longest side in meters

Operation	
Max	793

Minimum horizontal dimension:

Length of the shortest side in meters

Min 522

Initial Vertical Dimension: 3.40 meters

Initial Vertical Dimension is the Plume Height divided by 2.15

Rural or Urban: Urban

Is the site a rural or urban environment

Urban Population: 9,862,049 Los Angeles County (SCAQMD guidance)

Population of the County

Minimum Distance to Ambient Air: 1 meter (AERSCREEN Default)

Maximum Distance to Probe: 1,000 meters

This is the maximum distance from source to analyze.

Use Descrete Receptors: No

not using discrete receptor distances assumes a minimum distance of 1 meter which is conservative for this analysis.

Use Flag Pole Receptors: Yes

This assumes that the receptors are above ground level

Flag Pole Receptor Height: 2 meters (average height of a human)

Source Elevation: 0 meters (AERSCREEN Default)

Minimum & Maximum Temperature: 250 to 310 K (AERSCREEN Default)

Minimum Windspeed: 0.5 m/s (AERSCREEN Default)

Anemometer Height: 10 meters (AERSCREEN Default)

Surface Characteristics: AERMET Defaults

Dominant Surface Profile: Urban

Dominant Climate: Average Moisture

Land Use - See Assumptions

Construction Phase - See Assumptions - Paving phase left because with parking lot CalEEMod won't calculate emissions without it.

Off-road Equipment -

Off-road Equipment - See Assumptions

Off-road Equipment - CalEEMod requires paving phase with "parking lot" land use type. No paving associated with operations.

Trips and VMT - See Assumptions

Grading - See Assumptions

Vehicle Trips - workers included under "construction phasing" for operational emissions

Construction Assumptions

CalEEMod Inputs that are not modeling defaults:

Project Location:	County Los Angeles
Climate Zone:	9
Operational Year:	2020 (construction to occur in 2019 with operation beginning in 2020)
Utility Company:	SCE

Land Use Type:

Commercial - Gen Office	400 sq ft 0.4 KSF	9.25 acres 1.19 acres 0.02 acres 11 acres	spreading basin access roads Building area Total Area graded
Parking lot	5 acre	5 acres	

Note: General Office and parking lot are used so that energy from the type of use (the 400 sqft scale/office building) and lights for the night activities are included. Specific construction and operational activities are modeled to address project specific activities. Note: Parking lot used in operations only for electrical usage of lighting for lights applied to the permanent access roads.

CONSTRUCTION INFORMATION

Construction Schedule:

Phase	Start Date	End Date	Days/Week	# days
Grading	1/1/2019	6/17/2019	5	120
Soil Import	1/1/2019	4/8/2019	5	70
Building	6/18/2019	7/29/2019	5	30
Arch Coating	7/18/2019	7/31/2019	5	10

Construction activities include grading and creating a new paved access road across the Buena Vista spreading basin, drainage improvement, construction of lighting in and around the quarry, new entrance gate, and a 20 ft x 20 ft operation buliding for office and truck scales. Construction is anticipated to occur over 8 months in 2019. Modeling Start and End dates represent conservative modeling assumptions only and do not represent the actual start/end dates as phases may actually begin/end at different times. The number of days per phase is the more accurate determination of phase length.

United Rock Quarry

Construction Assumptions

Grading to create a new access road across the Buena Vista Spreading Basin and to improve site drainage would involve approximately 400 truck trips per day for 14 weeks, approximately 27,500 truck trips assuming using 10 CY trucks.

400
70
27,500 truck trips
275,000 cubic yards assuming 10 cubic yards per truck

Notes:

1. Due to the way CalEEMod calculates daily and annual emissions, and the fact that in order to accurately model 400 trucks for a max day, that would equal 28,000 trucks. This would accurately calculate daily emissions but overestimate GHG emissions. In order to accurately calculate both max daily emissions and annual emissions, the hauling was split into two phases. One that models the emissions for GHGs using 27,500 trips over the 14 week (70 day) period; and one that models 400 trips in a single day. The default CalEEMod hauling distances were used for fill for the Buena Vista Spreading Basin .

LST area determination:

Based on the *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds* (available: [http://www.aqmd.gov/search?q=CalEEMod fact sheet](http://www.aqmd.gov/search?q=CalEEMod%20fact%20sheet)). The acreage of disturbance is determined by the equipment used and the daily acres disturbed per day for that equipment. The following table determines the acreage for the proposed project's LST analysis for construction and operational activities.

Equipment	Acres/day	Construction		Operation	
		#	Acres	#	Acres
crawler Tractor	0.5	0	0	0	0
Graders	0.5	2	1	1	0.5
Dozers	0.5	2	1	2	1
Scrapers	1	0	0	0	0
Total Acres:			2		1.5

United Rock Quarry

Operational Assumptions

The depositing of debris into the quarry is modeled as operational activities because it will last for the duration of the project and therefore is the main operation/activity associated with the project. Quarry activities include a maximum of 5 employees to manage the unloading of materials with up to 400 truck loads per day (with a maximum of 7,200 cubic yards) over an 8 hour period.

Operational Mobile Sources

	Trips*/day	Trips/year	Miles	comments
<i>Typical Operation</i>				
Haul Trucks	800.0	200,000	3	From the site to the 210/605 Interchange
Employees	12.5	N/A	default	
<i>Emergency Operation</i>				
Haul Trucks	1250.0	25,000	3	From the site to the 210/605 Interchange (Additional daily trucks to reach 1,250 trucks per day)

* Trips = one way trips. Miles from project description for trucks. Employee daily trips are 2.5 times the number of employees (assumes some offsite travel for lunch)

* Employee trips modeled are greater than what is projected in the project specific traffic study because the traffic study was not available at the time the modeling was conducted. As the modeled employee trips are greater than those estimated in the traffic study this represents a conservative analysis.

*assumes use of 2 full 4,000 gallon trucks per day for watering and no landscaping needs.

Assumed connection to sewer

Solid Waste Generation: Default

Operational Offroad equipment:

Equipment type	Phase	Type/Model	HP	#	Average Daily	Emergency Daily Usage
Excavator	Grading	Cat 330	247	1	8 hrs	24 hrs
Grader	Grading	default	default (174)	1	4 hrs	12 hrs
Water truck	Grading	default	default (400)	1	8 hrs	24 hrs
Dozers	Grading	Swamp Cats D10	default (255)	2	8 hrs	24 hrs
scrubber/sweeper	Grading	default	default (64)	1	4 hr	12 hrs
Portable lighting	Grading	default	default (64)	1	0 hr	12 hrs

* With only 5 employees onsite, equipment cannot be operated the full 8 hours a day of operation. Therefore, as a conservative estimate the equipment hours of operation total 40 for the day (8 hr * 5 workers) and are allocated starting with the highest hp. The Water truck is assumed to operate for 4 hours per day (assuming 1 hour per watering episode).

Soil Import: 7,200 cubic yard/day 1,872,000 cubic yards/year

Rule 403: For onsite equipment it was set to 3 waterings per day or 61% reduction
For grading associated with sediment material it was set to 85% to account for saturated nature of the materials being graded.
