

V. MAPPING COMPONENT

This section contains maps of the entire 51-mile length of the Los Angeles River and the 9-mile length of Tujunga Wash identifying open spaces, existing facilities and recommended enhancements. The improvements shown were developed and recommended by Advisory Committee members based on input gathered from the community during public workshops.

The section divides the river into a series of reaches beginning at the river mouth in Long Beach, continuing upstream through the mid-cities, downtown Los Angeles, Glendale Narrows and ending at the San Fernando Valley and Tujunga Wash areas.

Each reach includes a description of that reach, a summary of issues, recommendations for cities within the reach and an “Other Projects” list.

(“Other Projects” are improvements previously planned by other entities and are identified numerically on the maps.) Finally, a map icon legend is provided for identifying existing facilities and recommended improvements.
