Hi Christine,

Thanks.

However, I thought your major concern was the opposite, such that after project implementation not enough water would be available for the west mitigation/avoided area? Holding water in the basin is typical and has been historically held in Devil's Gate up to about the 1,000 foot elevation line. Let's discuss.

Subject: Fwd: FW: [EXTERNAL] Fwd: FW: 2016 Prado Basin LBV report and map

This report is of interest relative to the operations of Devil's Gate Dam. It describes the damage to riparian vegetation occupied by the vireo in association with holding water in the basin for various periods. The proposed sediment removal project within Devil's Gate Reservoir involves a change in the design of the basin and associated change in dam operations due to change in capacity.

Additional information is needed on how the change in topography and associated dam operations will affect both the proposed mitigation sites and remaining riparian vegetation within the basin.
