

Pacoima Spreading Grounds Basin Enhancement Project
Air Quality Monitoring Program
Summary Report for October 2022

1. Background

- During the month of October 2022, real-time monitoring of air pollutants through four monitoring locations (Figure 1) for the Pacoima Spreading Grounds Basin Enhancement Project (Project) was conducted for the staging activities and active hauling.
- Results indicated average ambient PM₁₀ concentration of 20 - 25 µg/m³ for all four (4) stations.
 - All stations ran continuously
- Comparison of upwind and downwind stations at the Project site with nearest South Coast Air Quality Management District (SCAQMD) monitoring station (Reseda) PM_{2.5} showed similar trends in the data.

2. Field Activity Summary

- Grading of Basin 6 completed
- The following field activities were continued/initiated:
 - Grading operations of Basin 1
 - Structural work of:
 - East Settling Basin & West Settling Basin walls
 - Intake canal walls and invert

3. Air Monitoring Summary

- During staging and hauling activities, real-time monitoring of air pollutants for the Project was conducted and included:
 - Continuous 24 hours per day PM₁₀ monitoring at all four stations and meteorological parameters at two stations (one upwind and one downwind) for entire month.
 - Monitoring of ozone and NO₂ at two stations (one upwind and one downwind) continuously.

4. Compliance Summary

- Air monitoring data for PM₁₀ concentrations were in compliance with SCAQMD Rule 403 for the month of October 2022.
